

Hastings Cave and Thermal Springs

Activity Sheet - My Cave Food Web (I)

A Food Chains and Webs

In the cave most of the food for animals is carried into the cave in the stream, in the air or by visitors, on their clothing or shoes. Some animals prey on other animals living in the cave but most of them have a very limited diet and can only feed on one or two different types of food

1. What is a food chain?

2. Draw a food chain using, for example, a primary producer (e.g. algae) or other food source, a primary and a secondary consumer (herbivore, carnivore, omnivore, decomposer) found in the cave.

3. What happens when one form of life is removed from a food chain?
